Java Developer Test

Create a simple spring boot application that handles the following endpoints:

Endpoint for user to 'create' an account
POST /api/register
{
  username,
  password
}

Endpoint for user to log in
POST /api/login
{
  username,
  password
}

Secure endpoint *for user to get their personal information*
GET /api/users/{uuid}

Secure endpoint *for user to update their personal information*
POST /api/users/{uuid}
{
  name,
  email,
  phone
}

Please note that the secure endpoints should have some form of validation for the user to be able to perform those actions.
